

Anthroposophical Therapies

Art, Eurythmy, Rhythmical Massage, **Therapeutic Speech**.

I briefly experienced anthroposophical **therapeutic speech** therapy following multiple strokes and found it to be a **healing experience**. Widely practised in Switzerland and Germany, I hope it will become more readily available in other countries over time!
~Dr Jenny Dautlich

Therapeutic speech is an interactive, artistic-based **therapy** that **can help address imbalances** stemming from developmental, psychological and/or pathological disturbances.

Although it is not Speech and Language Therapy (SLT), anthroposophic **therapeutic speech** also **addresses speech and voice related disorders** and disturbances in speech development.

It is a **therapy for both speaking and non-speaking** children and **adults**, having as its medium the sounds of speech, speech rhythms and the breath.
